Understanding Careers: The Metaphors of Working Lives uses a unique framework of nine archetypal metaphors to encapsulate the field of career studies. Using an easy-to-read style, author Kerr Inkson examines key concepts, illustrating them with over 50 authentic career cases, to build an excellent bridge between theory and "real life." With unprecedented attention on global change, the current debate revolves around the availability and sustainability of natural resources and how to achieve equilibrium between what society demands from natural environments and what the natural resource base can provide. A full understanding of the range of issues, from the consequences of the changing resource bases to the degradation of ecological integrity and the sustainability of life, is crucial to the process of developing solutions to this complex challenge. Authored by world-class scientists and scholars, The Encyclopedia of Natural Resources provides an authoritative reference on a broad spectrum of topics such as the forcing factors and habitats of life; their histories, current status, and future trends; and their societal connections, economic values, and management. The content presents state-of-the-art science and technology development and perspectives of resource management. Written and designed with a broad audience in mind, the entries clearly elucidate the issues for readers at all levels without sacrificing the scientific rigor required by professionals in the field. Volume I - Land includes 98 entries that cover the topical areas of renewable and nonrenewable natural resources such as forest and vegetative; soil; terrestrial coastal and inland wetlands; landscape structure and function and change; biological diversity; ecosystem services, protected areas, and management; natural resource economics; and resource security and sustainability. Natural resources represent such a broad scope of complex and challenging topics that a reference book must cover a vast number of subjects in order to be titled an encyclopedia. The Encyclopedia of Natural Resources does just that. The topics covered help you face current and future issues in the maintenance of clean air and water as well as the preservation of land resources and native biodiversity. These regions are characterised by an extraordinary range of landforms and landscapes,

reflecting both the occurrence of many different rock types and drastic climatic changes over the last few million years, including ice sheet expansion and decay. The book begins by providing the geological and geomorphological context needed in order to understand this diversity in a relatively small area. In turn, it presents nearly thirty case studies on specific landscapes and landforms, all of which are landmarks in the territory discussed. These include the famous coastal cliffs and landslides, granite tors of Dartmoor, formerly glaciated mountains of Snowdonia and the Lake District, karst of Yorkshire, and many others. The geomorphology of London and the Thames is also included. Providing a unique reference guide to the geomorphology of England and Wales, the book is lavishly illustrated with diagrams, colour maps and photos, and written in an easy-to-read style. The contributing authors are distinguished geomorphologists with extensive experience in research, writing and communicating science to the public. The book will not only be of interest to geoscientists, but will also benefit specialists in landscape research, geoconservation, tourism and environmental protection. What is life like in England? Island Story weaves history and ideas telling a story of rebellion (think Brexit) and retail parks, migration and inertia, pessimism and disappearing ways of life, and a fiery, unrealized desire for collective belonging and power. Skeptical and inquisitive, Taylor cycled all round Britain with only a rusty bike and a tent, interviewing and staying with strangers from all walks of life. Without a map and travelling with the most basic of gear, the journey revels in serendipity and schadenfreude. Think you know the island? Island Story will have you think again. Most companies have to produce year-end accounts. UK GAAP is an essential tool for all those involved in preparing, auditing and using company accounts. It explains all accounting regulations in force and illustrates them fully with extracts from the accounts of major companies. As a result it is now the best-selling guide to UK financial reporting on the market. World Criminal Justice Systems, Ninth Edition, provides an understanding of major world criminal justice systems by discussing and comparing the systems of six of the world's countries -- each representative of a different type of legal system. An additional chapter on Islamic law uses three examples to illustrate the range of practice within Sharia. Political, historical, organizational, procedural, and critical issues confronting the justice systems are explained and analyzed. Each chapter contains material on government, police, judiciary, law, corrections, juvenile justice, and other critical issues. The ninth edition features an introduction directing students to the resources they need to understand comparative criminal justice theory and methodology. The chapter on Russia includes consideration of the turmoil in post-Soviet successor states, and the final chapter on Islamic law examines the current status of criminal justice systems in the Middle East. This book discusses the functions of revetments and the different aspects of structural performance. It includes example specifications and calculations that enable the engineer to choose the most stable, appropriate and cost-effective revetment system for a given situation. The book guides the engineer through the design process, from identifying hydraulic loading conditions and initial dimensioning of the revetment elements to detailed design of the revetment elements to ensure adequate protection against design wave conditions. Nearly 80 short papers originating from the 14th International Symposium on Intracranial Pressure and Brain Monitoring held in Tuebingen, Germany, in September 2010 present experimental as well as clinical research data related to the naming topics of the conference. The papers have undergone a peer-reviewing and are organized in the following sections: methods of brain monitoring and data analysis, methods of invasive and non-invasive ICP assessment, the role of autoregulation, the role of tissue oxygenation and near-infrared spectroscopy, hydrocephalus/IIH imaging and diagnosis, management and therapy of hydrocephalus, management and therapy of traumatic brain injury, management and therapy of subarachnoid and intracranial hemorrhage, experimental approaches to acute brain disease. The book gives a good overview on the latest research developments in the field of ICP and related brain monitoring and on management and therapy of relevant acute brain diseases. The present book is a text book on modern topics of Botany. The first chapter of this book is on plasma membrane,

wherein, details of transport mechanism is discussed. There are three sections in this book. Section I deals with the biochemistry and metabolism. Section II covers developmental physiology and the Section III is on plant biotechnology. In this section, Ti plasmid, transposable elements and transgenic plants are discussed in details. In this book there are separate chapters on bioinformatics and biosignalling. The text of this book is based on biochemical, physiological and molecular aspects, along with the modern and emerging ideas in Botany. This is the key publication for professionals and students in the metallurgy and foundry field. Fully revised and expanded, Castings Second Edition covers the latest developments in the understanding of the role of the liquid metal in controlling the properties of cast materials, and indeed, of all metallic materials that have started in the cast form. Practising foundry engineers, designers, and students will find the revealing insights into the behaviour of castings essential in developing their understanding and practice. John Campbell OBE is a leading international figure in the castings industry, with over four decades of experience. He is the originator of the Cosworth Casting Process, the pre-eminent production process for automobile cylinder heads and blocks. He is also co-inventor of both the Baxi Casting Process (now owned by Alcoa) developed in the UK, and the newly emerging Alotech Casting Process in the USA. He is Professor of Casting Technology at the University of Birmingham, UK. New edition of this internationally respected reference and textbook for engineers and students Develops understanding of the concepts and practice of casting operations Castings' is the key work on castings technology and process metallurgy, and an essential resource on contemporary developments and thinking on the new metallurgy of cast alloys Revised and updated throughout, with new material on subjects including surface turbulence, the new theory of entrainment defects including folded film defects, plus the latest concepts of alloy theory The "original, first-rate, serious, and beautiful" short fiction (New York Times Book Review) that introduced J. D. Salinger to American readers in the years after World War II, including "A Perfect Day for Bananafish" and the first appearance of Salinger's fictional Glass family. Nine exceptional stories from one of the great literary voices of the twentieth century. Witty, urbane, and frequently affecting, Nine Stories sits alongside Salinger's very best work--a treasure that will be passed down for many generations to come. Established in Vienna in 1977, the International Association of Vehicle System Dynamics (IAVSD) has since held its biennial symposia throughout Europe and in the USA, Canada, Japan, South Africa and China. The main objectives of IAVSD are to promote the development of the science of vehicle dynamics and to encourage engineering applications of this field of science, to inform scientists and engineers on the current state-of-the-art in the field of vehicle dynamics and to broaden contacts among persons and organisations of the various countries engaged in scientific research and development in the field of vehicle dynamics and related areas. IAVSD 2017, the 25th Symposium of the International Association of Vehicle System Dynamics was hosted by the Centre for Railway Engineering at Central Queensland University, Rockhampton, Australia in August 2017. The symposium focused on the following topics related to road and rail vehicles and trains: dynamics and stability; vibration and comfort; suspension; steering; traction and braking; active safety systems; advanced driver assistance systems; autonomous road and rail vehicles; adhesion and friction; wheel-rail contact; tyre-road interaction; aerodynamics and crosswind; pantograph-catenary dynamics; modelling and simulation; driver-vehicle interaction; field and laboratory testing; vehicle control and mechatronics; performance and optimization; instrumentation and condition monitoring; and environmental considerations. Providing a comprehensive review of the latest innovative developments and practical applications in road and rail vehicle dynamics, the 213 papers now published in these proceedings will contribute greatly to a better understanding of related problems and will serve as a reference for researchers and engineers active in this specialised field. Volume 1 contains 78 papers under the subject heading Road. Bovine spongiform encephalopathy (BSE) has become the most publicly recognizable example of a group of fatal neurodegenerative diseases caused by

proteinaceous infectious particles called prions. The contributors to this volume, all internationally recognized experts in their fields, provide an introduction to prion biology, followed by reviews of the latest information on BSE, vCJD, and chronic wasting disease, an animal prion disease that has recently emerged in North America. This book provides an insight into my lifetime experiences from birth to the present day. It also concentrates thoroughly on defining the qualities desired of an SAS military leader. In terms of personal experiences of leadership I would say that the military provided me with a blueprint of acceptable leadership behaviours. Looking at the training I went through with Special Forces reveals some of the unique qualities that are required to fulfil this role. I would say that conventional military regiments differed somewhat to the democratic, even abdicratic approach of Special Forces units such as the SBS, SAS and 2REP French Foreign Legion. While I was serving with the Marines I wanted to transfer to a Special Forces unit but was refused entry to the organisation because of my commitment to the Marines. This was a great issue at the time but I eventually rejoined the SAS regiment anyway after resigning from the Marines. My first period of SAS training followed passing of the usual Battle Fitness Test (BFT) that was completed while at a barracks off the King's Road in Chelsea. I can explain that my first thoughts about joining the SAS occurred in 1976 when I was serving as a junior guardsman at Pirbright in Surrey. The inspiration came from my platoon commander who had previously been a member of the Guards Independent Parachute Brigade. This was a unit that largely preceded G Squadron of the SAS Regiment. Later actions then included the Iranian embassy incident under direction of the Counter Revolutionary Warfare (CRW) team and patrols in areas of Northern Ireland that were subject to violent terrorist actions. I served also with 23 and 21 between 1985 and 1992 and the Scots Guards and French Foreign Legion experiences came early in my career. The Economics of Empire: Genealogies of Capital and the Colonial Encounter is a multi-disciplinary intervention into postcolonial theory that constructs and theorizes a political economy of empire. This comprehensive collection traces the financial genealogies associated with the colonial enterprise, the strategies of economic precarity, the pedigrees of capital, and the narratives of exploitation that underlay and determined the course of modern history. One of the first attempts to take this approach in postcolonial studies, the book seeks to sketch the commensal relation—a symbiotic "phoresy"—between capitalism and colonialism, reading them as linked structures that carried and sustained each other through and across the modern era. The scholars represented here are all postcolonial critics working in a range of disciplines, including Political Science, Sociology, History, Peace and Conflict Studies, Legal Studies, and Literary Criticism, exploring the connections between empire and capital, and the historical and political implications of that structural hinge. Each author engages existing postcolonial and poststructuralist theory and criticism while bridging it over to research and analytic lenses less frequently engaged by postcolonial critics. In so doing, they devise novel intersectional and interdisciplinary frameworks through which to produce more greatly nuanced understandings of imperialism, capitalism, and their inextricable relation, 'new' postcolonial critiques of empire for the 21st century. This book will be an excellent resource for students and researchers of Postcolonial Studies, Literature, History, Sociology, Economics, Political Science and International Studies, among others. The Catcher in the Rye is the ultimate novel for disaffected youth, but it's relevant to all ages. The story is told by Holden Caulfield, a seventeen-year-old dropout who has just been kicked out of his fourth school. Throughout, Holden dissects the 'phony' aspects of society, and the 'phonies' themselves- the headmaster whose affability depends on the wealth of the parents, his roommate who scores with girls using sickly-sweet affection. Lazy in style, full of slang and swear words, it's a novel whose interest and appeal comes from its observations rather than its plot intrigues (in conventional terms, there is hardly any plot at all). Salinger's style creates an effect of conversation, it is as though Holden is speaking to you personally, as though you too have seen through the pretences of the American Dream and are growing up unable to see the point of living in, or contributing to, the society around you. Written with the clarity of a boy leaving childhood, it deals with society, love, loss, and expectations without ever falling into the clutch of a cliché Among the first titles published in 1978, with more than 150,000 copies in print in three editions, Japanese Maples is a Timber Press classic. Japanese maples are unlike any other tree. They boast a remarkable diversity of color, form, and texture. As a result of hundreds of years of careful breeding, they take the center stage in any garden they are found. In the

last decade, the number of Japanese maple cultivars available to gardeners has doubled and there is a pressing need for an up-to-date reference. This new fourth edition offers detailed descriptions of over 150 new introductions, updates to plant nomenclature, and new insights into established favorites. Gardeners will relish the practical advice that puts successful cultivation within everyone's grasp. Accurate identification is made simple with over 600 easy-to-follow descriptions and 500 color photographs.

Legal Education in Asia: From Imitation to Innovation is a curated collection of case studies that critically examine how conventional "transplanted" approaches to legal education are, or are on the cusp of being, redesigned across East Asia. The introduction and rapid spread of two Eurasian mussel species, *Dreissena polymorpha* (zebra mussel) and *Dreissena rostriformis bugensis* (quagga mussel), in waters of North America has caused great concern among industrial and recreational water users. These invasive species can create substantial problems for raw water users such as water treatment facilities and power plants, and they can have other negative impacts by altering aquatic environments. In the 20 years since the first edition of this book was published, zebra mussels have continued to spread, and quagga mussels have become the greater threat in the Great Lakes, in deep regions of large lakes, and in the southwestern United States. Quagga mussels have also expanded greatly in eastern and western Europe since the first book edition was published. **Quagga and Zebra Mussels: Biology, Impacts, and Control, Second Edition** provides a broad view of the zebra/quagga mussel issue, offering a historic perspective and up-to-date information on mussel research. Comprising 48 chapters, this second edition includes reviews of mussel morphology, physiology, and behavior. It details mussel distribution and spread in Europe and across North America, and examines policy and regulatory responses, management strategies, and mitigation efforts. In addition, this book provides extensive coverage of the impact of invasive mussel species on freshwater ecosystems, including effects on water clarity, phytoplankton, water quality, food web changes, and consequences to other aquatic fauna. It also reviews and offers new insights on how zebra and quagga mussels respond and adapt to varying environmental conditions. This new edition includes seven video clips that complement chapter text and, through visual documentation, provide a greater understanding of mussel behavior and distribution. The British Museums collection is one of the worlds finest and broadest, ranging from prehistoric times to the present in ancient and modern cultures around the globe. Each object is presented with its own fascinating story and is strikingly illustrated in full colour. From the Warren Cup to Dürers Rhinoceros, the Lewis Chessmen to the Aztec turquoise serpent and the Gayer-Anderson Cat, the iconic objects of the British Museum are here presented in an exciting and accessible new way, highlighting the superb craftsmanship and ingenuity of those who created each of these splendid pieces. Grouped into sections based on cross-cultural themes, such as rulers, mythical beasts, dress and the human form, the resulting juxtapositions offer intriguing new insights into these widely varied masterpieces. Introduced by Neil MacGregor, Director of the British Museum, this is a stunning overview of artistic and cultural achievement around the world.

Dam safety is central to public protection and economic security. However, the world has an aging portfolio of large dams, with growing downstream populations and rapid urbanization placing dual pressures on these important infrastructures to provide increased services and to do it more safely. To meet the challenge, countries need legal and institutional frameworks that are fit for purpose and can ensure the safety of dams. Such frameworks enable dams to provide water supplies to meet domestic and industrial demands, support power generation, improve food security, and bolster resilience to floods and droughts, helping to build safer communities. **Laying the Foundations: A Global Analysis of Regulatory Frameworks for the Safety of Dams and Downstream Communities** is a systematic review of dam regimes from a diverse set of 51 countries with varying economic, political, and cultural circumstances. These case studies inform a continuum of legal, institutional, technical, and financial options for sustainable dam safety assurance. The findings from the comparative analysis will inform decisionmakers about the merits of different options for dam safety and help them systematically develop the most effective approaches for the country context. By identifying the essential elements of good practices

guided by portfolio characteristics, this tool can help identify gaps in existing legal, institutional, technical, and financial frameworks to enhance the regulatory regime for ensuring the safety of dams and downstream communities. Bringing together cognitive therapy clinicians, researchers, and theoreticians, this volume integrates the latest findings on the conceptualization and treatment of a range of psychological and psychiatric problems. From depression and anxiety, to eating disorders, hypochondriasis, obsessive-compulsive disorder, panic, personality disorders, sexual problems, social phobia, and substance abuse, authors discuss the needs of individual patients and structuring effective interventions. Factors such as therapist competence, the therapeutic relationship and empathy are systematically examined. Chapters also consider the specific needs of populations such as children and adolescents and the mentally ill. These proceedings represent the work of contributors to the 17th International Conference on Intellectual Capital, Knowledge Management & Organisational Learning (ICICKM 2020), hosted by ACI and the University of Toronto, Canada on 15-16 October 2020. The Conference Chairs are Dr. Anthony Wensley, from the University of Toronto and Dr. Max Evans, from McGill University. The Programme Chair is Dr. Ilja Frissen from McGill University.
