**Procurement by International Organizations Feb 22 2022** How do international organizations procure goods, services and works to carry out their institutional mission? How does this procurement activity affect individuals? Does the procurement relationship between international organizations and private subjects bring an even distribution of rights and duties? Are international organizations accountable to private subjects and states when allocating their resources through procurement? The book explores the complex phenomenon of procurement by international organizations from the point of view of the relationship between international organizations and private subjects. It provides, for the first time, a systematization and conceptualization of the emerging rules and practices of procurement by international organizations. It also identifies the international political dynamics and interplay of interests underlying these rules and practices. In doing so, it shows how these dynamics shape the exercise of international public authority over private subjects, and the scope of private subjects' rights vis-à-vis international organizations.

**Efforts to Address Problems with Public Procurement in EU Cohesion Expenditure Should be Intensified Oct 28 2019** "Failure to comply with public procurement rules has been a perennial and significant source of error in EU cohesion expenditure. Serious errors resulted in a lack, or complete absence, of fair competition and/or in the award of contracts to those who were not the best bidders. The Court of Auditors found that the Commission and Member States have started to address the problem, but there is still a long way to go and efforts need to be intensified." -- Page 4 of cover.

**Understanding Sustainable Public Procurement Apr 26 2022** This book explores the development of sustainable public procurement (SPP) as a strategic policy instrument to support decoupling of economic growth from environmental degradation and enhancing social well-being. Offering an in-depth case study of India's SPP implementation trajectory, it discusses the challenges of integrating sustainability criteria into purchasing decisions, and examines policy choices and best practices to address them. It investigates the legislative, institutional, and governance framework for SPP in India, and identifies priority actions to accelerate wider uptake of SPP policy and practices. Furthermore, the book highlights the evolving role of SPP policies in response to emerging global mega trends, such as international trade, low carbon economy, circular economy, and Industry 4.0. Given its scope, this book appeals to scholars of economics, public administration, and environmental and social sciences, as well as to policymakers, practitioners, and advocates interested in steering transformational changes towards mainstreaming sustainable procurement practices in developing economies at the desired scale. "This book comes at the right time to compensate for the lack of in-depth works on the origins, nature and reality of the implementation of sustainable purchases." - Farid Yaker,

**Computing Procurement Dec 03 2022** This book shows how to avoid costly and time-consuming errors in acquiring new computer systems. It describes the basic investment strategy, from the initial identification of needs and the specification of problems to the final bids, proposals, negotiations, and the decision to buy. The book assumes no specialized knowledge of computers and is especially written for individuals and committees in large organizations who are responsible for deciding what work can best be done by a computer and which system to buy. It clearly presents the issues involved, including practical examples, and is the first such work to concentrate on the problems involved in choosing a large computing system, as opposed to an individual microprocessor. The author has a great deal of experience in the area, having been Secretary of
