In World War II, the U.S. Army not only supplied its soldiers with the most modern equipment and uniforms, suitable for any combat situation, but went as far as providing them with their favorite drinks or candy bars, and seemingly anything else they might require. This comprehensive reference book brings together all the equipment issued to American soldiers in the European Theater of Operations, 1943–45. Each item is presented with its catalog numbers, described in detail and fully depicted in photographs, including close-ups of the labels to aid identification of items. Graphics and diagrams offer additional information and context. This second volume of the G.I. Collector's Guide is fully revised with the addition of sections including personal equipment, trophies and souvenirs, the wartime draft and Stateside training, and the life of POWs in German camps. More than one thousand new artifacts with detailed captions are featured in this completely revised new work. Expert Henri-Paul Enjames describes all variations of uniform, insignia, badges, weapons, and equipment in detail. As a complete catalog with high-quality photographs,

this book is invaluable to both family historians researching grandpa's kit found in the attic and to collectors in their quest to find authentic items among the reproductions that flood the modern market. Considers S. 9, H.R. 74, and numerous related bills, to provide education and training benefits to veterans who have served subsequent to Jan. 1955. Eligibility would be based upon service during the induction period and upon service in a combat zone. Working practices between the UK and Welsh Assembly governments in relation to cross-border policies appear much improved since the Committee's earlier reports on this subject. But a number of outstanding issues remain in transport, health and further and higher education. On transport the Committee welcomes the planned electrification of the Great Western Main Line. However, the Department for Transport appears to have washed its hands of any strategic responsibility for cross-border roads. The A483 is the clearest example of a road vital for travel within Wales but which is not important to the English region in which it is located, and as a result loses out on funding. The Committee stresses the need for comparative data on which to build solid research comparing NHS performance in the devolved nations. More needs to be done to raise public awareness of the differences in services people can expect to receive on both sides of the border. Transparency of information is vital. Research proposals in the UK Government's Higher Ambitions strategy for higher education make no reference to nations other than England, despite the UK-wide research remit of the Department for Business, Innovation

and Skills. The Committee calls for details about how research funding proposals apply to all four nations. This document contains proceedings of Senate hearings before a subcommittee of the Committee on Appropriations on H.R. 2127, an act making appropriations for the Departments of Labor, Health and Human Services, Education, and other related agencies for the fiscal year ending September 30, 1996. The document contains testimonies, answers to committee questions, and prepared statements from: Robert Reich, Secretary of Labor; Donna Shalala, Secretary of Health and Human Services; Richard Riley, Secretary of Education; Harold Varmus, Director of the National Institutes of Health; and representatives from other federal agencies. Secretary Riley's testimony includes comments on proposed revisions from Department of Education Programs, the streamlining of Department services and functions, the features of the 1996 budget request, standards-based reform, and preparing students to work in the Information Age. A subject index and list of witnesses, communications, and prepared statements are included. (LMI) This hearing addresses veterans' education assistance programs administered by the Department of Veterans Affairs. A special focus is the Montgomery GI Bill. Testimony includes statements and prepared statements and material submitted for the record of individuals representing the following: Department of Defense, Air Force, Coast Guard, AMVETS, Army, Veterans of Foreign Wars, Vietnam Veterans of America, American Legion, Marine Corps, Non-Commissioned Officers Association, Department of Veterans

Affairs, Navy, and Disabled American Veterans. Written committee questions of Congressmen are accompanied by responses from the following: Department of Veterans Affairs, Department of Defense, Army, Navy, Marine Corps, Air Force, Coast Guard, and Department of Labor. (YLB) This volume provides a concise overview of the most important and vital aspects of upper endoscopy. The text is specifically geared towards first-year GI fellows and novice endoscopists in order to help them rapidly assimilate the core concepts needed to perform upper endoscopy in the most important and most commonly encountered clinical situations. The book also covers the most important variations of normal anatomy and pathology and how to manage them. Key concepts covered include foreign body removal, diagnosis and management of upper GI bleeding, Barrett's Esophagus, evaluation and management of benign and malignant strictures of the esophagus, stomach, and duodenum, submucosal lesions, and evaluation of post operative upper GI anatomy. A plethora of high quality color illustrations and narrated online video clips illustrate major concepts in the book are also included. Written by experts in the field, Upper Endoscopy for GI Fellows is a valuable resource for new physicians just starting to perform upper endoscopy. From Yom Kippur in a shattered French town to the Shabbat service at Dachau, the writings of a Jewish chaplain in the American army during World War II tell the story of the war and how it changed one small-town rabbi. Mar. 29 hearing held in Austin, Tex. The school of thought surrounding the urban ecosystem has

increasingly become in vogue among researchers worldwide. Since half of the world's population lives in cities, urban ecosystem services have become essential to human health and wellbeing. Rapid urban growth has forced sustainable urban developers to rethink important steps by updating and, to some degree, recreating the human–ecosystem service linkage. Assessing, as well as estimating the losses of ecosystem services can denote the essential effects of urbanization and increasingly indicate where cities fall short. This book contains 13 thoroughly refereed contributions published within the Special Issue “Urban Ecosystem Services”. The book addresses topics such as nature-based solutions, green space planning, green infrastructure, rain gardens, climate change, and more. The contributions highlight new findings for landscape architects, urban planners, and policymakers. Important future cities research is considered by looking at the system connectivity between the social and ecological sphere—via varying forms of urban planning, management, and governance. The book is supported by methods and models that utilize an urban sustainability and ecosystem service-centric focus by adding knowledge-base and real-world solutions into the urbanization phenomenon. The ongoing growth of information and communication technology is a high priority for any developing country. These advances help progress with different sectors of socio-economic development within these countries, and strengthens our global economy as a whole. Securing Government Information and Data in Developing Countries provides an informative examination of the

latest strategies and methods for protecting government information and data within developing countries. Presenting dynamic topics such as security-critical systems, watermarking authentication, hybrid biometrics, and e-voting systems, this publication is an ideal reference source for practitioners, academicians, students, and researchers who are interested in the emerging trends of data security for governments. Geographic information systems have developed rapidly in the past decade, and are now a major class of software, with applications that include infrastructure maintenance, resource management, agriculture, Earth science, and planning. But a lack of standards has led to a general inability for one GIS to interoperate with another. It is difficult for one GIS to share data with another, or for people trained on one system to adapt easily to the commands and user interface of another. Failure to interoperate is a problem at many levels, ranging from the purely technical to the semantic and the institutional. Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate, and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc. It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem. Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level.

Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data, and these are covered in chapters on information marketplaces, with special reference to geographic information. Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems, and nowhere is the impact of interoperability more likely to cause fundamental change than in education, as educators address the needs of a new generation of GIS users with access to a new generation of tools. The book concludes with a series of chapters on education and institutional change. Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science, geography, spatial databases, and interoperability and as a reference for researchers and practitioners in industry, commerce and government.
