Mineral Resources, Grade 11 Jun 29 2022 What if you could challenge your eleventh graders to come up with a design solution for developing, managing, and utilizing mineral resources? With this volume in the STEM Road Map Curriculum Series, you can! Mineral Resources outlines a journey that will steer your students toward authentic problem solving while grounding them in integrated STEM disciplines. Like the other volumes in the series, this book is designed to meet the growing need to infuse real-world learning into K–12 classrooms. This interdisciplinary, three-lesson module uses project- and problem-based learning to help students develop an in-depth understanding of mineral resources by researching the utility and impact of particular mineral resources on society. Working in teams, students will locate quantitative and qualitative data on mineral resources and discern the reliability of the information, then use their data to write an opinion article and develop a website to convince readers of the effectiveness of a particular design solution for developing, managing, and utilizing mineral resources. To support this goal, students will do the following: Explain how mineral resources are located and used in various ways in society. Explain why mineral resources are important to society. Critically evaluate quantitative and qualitative data about mineral resources. Write an opinion article demonstrating their knowledge about competing design solutions for extracting mineral resources. Literacy and Mothering Oct 10 2020 Winner of the 2013 Eleanor Maccoby Award from APA Division 7 Women's schooling is strongly related to child survival and other outcomes beneficial to children throughout the developing world, but the reasons behind these statistical connections have been unclear. In Literacy and Mothering, the authors show, for the first time, how communicative change plays a key role: Girls acquire academic literacy skills, even in low-quality schools, which enable them, as mothers, to understand public health messages in the mass media and to navigate bureaucratic health services effectively, reducing risks to

their children's health. With the acquisition of academic literacy, their health literacy and health navigation skills are enhanced, thereby reducing risks to children and altering interactions between mother and child. Assessments of these maternal skills in four diverse countries - Mexico, Nepal, Venezuela, and Zambia - support this model and are presented in the book. Chapter 1 provides a brief history of mass schooling, including the development of a bureaucratic Western form of schooling. Along with the bureaucratic organization of healthcare services and other institutions, this form of mass schooling spread across the globe, setting new standards for effective communication - standards that are, in effect, taught in school. Chapter 2 reviews the demographic and epidemiological evidence concerning the effects of mothers' education on survival, health, and fertility. In this chapter, the authors propose a model that shows how women's schooling, together with urbanization and changes in income and social status, reduce child mortality and improve health. In Chapter 3, the authors examine the concept of literacy and discuss how its meanings and measurements have been changed by educational research of the last few decades. Chapter 4 introduces the four-country study of maternal literacy. Chapters 5, 6, and 7 present the findings, focusing on academic literacy and its retention (Chapter 5), its impact on maternal health literacy and navigation skills (Chapter 6), and changes in mother-child interaction and child literacy skills (Chapter 7). Chapter 8 presents a new analysis of school experience, explores policy implications, and recommends further research.
