Geometric Constructions Jun 10 2021
Geometric constructions have been a popular
part of mathematics throughout history. The
first chapter here is informal and starts from
scratch, introducing all the geometric
constructions from high school that have been
forgotten or were never learned. The second

chapter formalises Plato's game, and examines problems from antiquity such as the impossibility of trisecting an arbitrary angle. After that, variations on Plato's theme are explored: using only a ruler, a compass, toothpicks, a ruler and dividers, a marked rule, or a tomahawk, ending in a chapter on geometric constructions by paperfolding. The author writes in a charming style and nicely intersperses history and philosophy within the mathematics, teaching a little geometry and a little algebra along the way. This is as much an algebra book as it is a geometry book, yet since all the algebra and geometry needed is developed within the text, very little mathematical background is required. This text has been class tested for several semesters with a master's level class for secondary teachers.

Essential Maths May 21 2022 "This book is for students working towards A Level Mathematics. Together with Book 1 it covers all the Pure Mathematics necessary for the full A level. It can be used in the classroom, and also contains sufficient explanations and worked examples for students working on their own. The exercises are plentiful, and graded in difficulty, to allow students to build confidence where necessary, and to extend themselves where possible. The work is collected into sections on Algebra, Coordinate Geometry, Binomial Expansion, Calculus, Trigonometry, Exponentials and Logarithms, Vectors and Proof, in line with the 2017 syllabus, and is

suitable for use by students studying under any of the main examination boards."--Page v.
