#1 NEW YORK TIMES BEST SELLER • A classic legal thriller—with a twist. • "A suspenseful thriller mixed with powerful themes such as false incarceration, the death penalty and how the legal system shows prejudice." —Associated Press In the small

Florida town of Seabrook, a young lawyer named Keith Russo was shot dead at his desk as he worked late one night. The killer left no clues. There were no witnesses, no one with a motive. But the police soon came to suspect Quincy Miller, a young Black man who was once a client of Russo's. Quincy was tried, convicted, and sent to prison for life. For twenty-two years he languished in prison, maintaining his innocence. But no one was listening. He had no lawyer, no advocate on the outside. In desperation, he writes a letter to Guardian Ministries, a small nonprofit run by Cullen Post, a lawyer who is also an Episcopal minister. Guardian accepts only a few innocence cases at a time. Cullen Post travels the country fighting wrongful convictions and taking on clients forgotten by the system. With Quincy Miller, though, he gets far more than he bargained for. Powerful, ruthless people murdered Keith Russo, and they do not want Quincy Miller exonerated. They killed one lawyer twenty-two years ago, and they will kill another without a second thought. The Royal Society has published the findings of a major study into geoengineering the climate. The study, chaired by Professor John Shepherd FRS, was researched and written over a period of twelve months by twelve leading academics

representing science, economics, law and social science. Man-made climate change is happening and its impacts and costs will be large, serious and unevenly spread. The impacts may be reduced by adaptation and moderated by mitigation, especially by reducing emissions of greenhouse gases. However, global efforts to reduce emissions have not yet been sufficiently successful to provide confidence that the reductions needed to avoid dangerous climate change will be achieved.

This has led to growing interest in geoengineering, defined here as the deliberate large-scale manipulation of the planetary environment to counteract anthropogenic climate change. However, despite this interest, there has been a lack of accessible, high quality information on the proposed geoengineering techniques which remain unproven and potentially dangerous. This study provides a detailed assessment of the various methods and considers the potential efficiency and unintended consequences they may pose. It divides geoengineering methods into two basic categories: 1. Carbon Dioxide Removal (CDR) techniques, which remove CO₂ from the atmosphere. As they address the root cause of climate change, rising CO₂ concentrations, they have relatively low uncertainties and risks. However, these techniques work slowly to reduce global temperatures. 2. Solar Radiation Management (SRM) techniques, which reflect a small percentage of the sun's light and heat back into space. These methods act quickly,

and so may represent the only way to lower global temperatures quickly in the event of a climate crisis. However, they only reduce some, but not all, effects of climate change, while possibly creating other problems. They also do not affect CO₂ levels and therefore fail to address the wider effects of rising CO₂, including ocean acidification. The report recommends: Parties to the UNFCCC should make increased efforts towards mitigating and adapting to climate change and in particular to agreeing to global emissions reductions of at least 50% on 1990 levels by 2050 and more thereafter; CDR and SRM geoengineering methods should only be considered as part of a wider package of options for addressing climate change. CDR methods should be regarded as preferable to SRM methods. Relevant UK government departments, in association with the UK Research Councils, should together fund a 10 year geoengineering research programme at a level of the order of £10M per annum. The Royal Society, in collaboration with international science partners, should develop a code of practice for geoengineering research and provide recommendations to the international scientific community for a voluntary research governance framework. The Royal Society issued a call for submissions and convened a small ethics workshop as part of the evidence gathering process. More information is available in the main report. First published in 2000. Routledge is an imprint of Taylor & Francis, an informa company.

CONTRIBUTIONS TO THE SOCIOLOGY OF LANGUAGE brings to students, researchers and practitioners in all of the social and language-related sciences carefully selected book-length publications dealing with sociolinguistic theory, methods, findings and applications. It approaches the study of language in society in its broadest sense, as a truly international and interdisciplinary field in which various approaches, theoretical and empirical, supplement and complement each other. The series invites the attention of linguists, language teachers of all interests, sociologists, political scientists, anthropologists, historians etc. to the development of the sociology of language. Concise introduction to permutation groups, focusing on invariant cartesian decompositions and applications in algebra and combinatorics. This book constitutes the proceedings of the 9th International Conference on Statistical Language and Speech Processing, SLSP 2021, held in Cardiff, UK, in November 2021. The 9 full papers presented in this volume were carefully reviewed and selected from 21 submissions. The papers present topics of either theoretical or applied interest discussing the employment of statistical models (including machine learning) within language and speech processing. The latest edition of a cataloging classic, Conversion Tables, 3rd edition includes the 22nd edition of the Dewey Decimal Classification, as well as almost one thousand additional sets of class numbers and

corresponding Library of Congress subject headings. Whether used to fill in missing classification numbers or reclassify an entire collection from one class schedule to another, this three volume work offers an affordable and highly effective guide to conversion. This classic cataloging tool has been updated to include the 22nd edition of the Dewey Decimal Classification, as well as almost one thousand additional sets of class numbers and corresponding Library of Congress subject headings. As with the previous edition, it is arranged in three sections: LC to Dewey, Dewey to LC, and LC subject headings to both. Thus, each volume contains the same list of classifications in the two systems and their corresponding subject headings, but are simply arranged differently. Whether used to fill in missing classification numbers or reclassify an entire collection from one class schedule to another, Scott's Conversion Tables work offers an affordable and highly effective guide to conversion, and will save copy catalogers everywhere countless hours of searching to boot! Comprehensive student-friendly resources designed for teaching Cambridge International AS and A Level English Language (syllabus 9093). The core aim of this Coursebook is to help students to develop and apply the key skills they need to achieve in AS and A Level English Language. They will build the skills needed for assessment through frequent activities. Divided into two distinct parts for AS and A Level studies, the book

covers a wide range of reading skills, such as understanding aspects of style, voice and tone. It also addresses the conventions of key kinds of writing and spoken language, from scripted speeches to travel articles, and looks at how they can capture these conventions in their own work. everywhere countless hours of searching to boot! This book addresses how cross-linguistic interference is represented in the bilingual mind. Examining novel oral production data from older bilingual children representing two Quechua varieties, this research concludes that interference in the feature specification of functional categories leads to language change in a language contact situation, and links convergence, a common set of feature values for the same functional category in both languages to the activation of features related to the informational structure of the sentence. These mechanisms are illustrated in detail by the presence of overt determiners, canonical SVO word order and the absence of accusative marking in bilingual Quechua and by neutralization of case and gender distinctions in direct object pronouns as well as in the emergence of null pronouns with definite antecedents in bilingual Spanish. The study focuses on the investigation of the process during which raters of EFL written performance make their decisions. It consists of a pilot and a main study, each of which concentrates on assessment of writing. The rationale is to detect the decision-making processes that raters follow, which can be used for training raters, and with which the reliability of rating can be improved. The pilot study is based on data collected during a large-scale language proficiency assessment of two age groups from learners of English and German languages. Raters were asked to think

aloud during the rating task. Data was then transcribed and analysed. The participants in the main study were novice raters, who produced verbal protocols. 37 EFL teacher trainees took part in rater training and practised think-aloud protocol production. Then, they evaluated ten compositions written by EFL learners and verbalised their thought processes. The verbal protocols served as a basis for data collection. The analysis of data resulted in the conclusion according to which more reliable and objective assessment is possible when evaluating written performance. Christine de Pizan (ca. 1364-ca. 1431) has long been recognized as France's first professional woman of letters, and interest in her voluminous and wide-ranging corpus has been steadily rising for decades. During the tumultuous later years of the Hundred Years' War, Christine's lone but strong feminine voice could be heard defending women, expounding the highest ideals for good governance, and lamenting France's troubled times alongside her own personal trials. In *The Mutability of Fortune*, Christine fuses world history with autobiography to demonstrate mankind's subjugation to the ceaselessly changing, and often cruel, whims of Fortune. Now, for the first time, this poem is accessible to an English-speaking audience, further expanding our appreciation of this ground-breaking woman
