Teaching and Learning STEM Nov 22 2019 Rethink traditional teaching methods to improve student learning and retention in STEM Educational research has repeatedly shown that compared to traditional teacher-centered instruction, certain learner-centered methods lead to improved learning outcomes, greater development of critical high-level skills, and increased retention in science, technology, engineering, and mathematics (STEM) disciplines. Teaching and Learning STEM presents a trove of practical research-based strategies for designing and teaching STEM courses at the university, community college, and high school levels. The book draws on the authors' extensive backgrounds and decades of experience in STEM education and faculty development. Its engaging and well-illustrated descriptions will equip you to implement the strategies in your courses and to deal effectively with problems (including student resistance) that might occur in the implementation. The book will help you: Plan and conduct class sessions in which students are actively engaged, no matter how large the class is Make good use of technology in face-to-face, online, and hybrid courses and flipped classrooms Assess how well students are acquiring the knowledge, skills, and conceptual understanding the course is designed to teach Help students develop expert problem-solving skills and skills in communication, creative thinking, critical thinking, high-performance teamwork, and self-directed learning Meet the learning needs of STEM students with a broad diversity of attributes and backgrounds The strategies presented in Teaching and Learning STEM don't require revolutionary time-intensive changes in your teaching, but rather a gradual integration of traditional and new methods. The result will be continual improvement in your teaching and your students' learning. More information about Teaching and Learning STEM can be found at <http://educationdesignsinc.com/book> including its preface, foreword, table of contents, first chapter, a reading guide, and reviews in 10 prominent STEM education journals.

Relational and Critical Perspectives on Education for Sustainable Development Mar 27 2020 This volume focuses on the fourth Sustainable Development Goal (SDG), education, to look at sustainability from various angles with the purpose of challenging preconceptions about what sustainable education might entail and how it should be conducted. To this end, the book assembles scholars from various research fields and disciplines, who are willing to be at the cutting edge regarding sustainability and education on all levels with students in the ages of 6-15. Through this approach, the text points towards a "wild pedagogy" in line with post-sustainable thinking. This involves agency and the role of nature itself as a co-educator, and promotes cultural changes, and explorative processes of finding "the wild" the unknown, and complexity in nature and thus of challenging the human need for control. This approach is also, in line with the 2030 Agenda, an attempt to move from advocating predetermined behavioural change to embracing a pluralistic perspective on sustainability, based on holistic views on education. Such views include curiosity, wonderment, compassion and agency as guiding lights. The book is structured into three sections, based on three interrelated strands. These strands are, in various ways, dependent on one another and further engaged with bringing education theory and practice together. These strands are 1) Belonging and sensing, 2) Critical thinking, social justice and action competence, and 3) Creating hope in a vanishing world. These strands aim to increase our access to and understanding of the ways in which sustainability can be integrated into education and why. The purpose of the text is to encourage educators of all kinds and levels, as well as scholars in different fields, to explore new perspectives on education for sustainable development. The book examines probes in diverse academic fields and focuses on how to combine different approaches and content, and therefore everyone interested in interdisciplinary and cross-curricular teaching and learning should find this work enlightening. .

Fraud and Education Nov 15 2021 Fraud and Education gives an informative overview of cheating in examinations in the U.S. and foreign countries and of the current state of fraud in education and research. It differs however, from many popular treatises on the same subject, in that it is not intended as a blanket condemnation of American (or foreign) education. Instead of assigning blame for the prevalence of fraud, the authors point to such factors as growth in the number of persons engaged in education and research, pressures on individuals to succeed, improvements in communications (especially the Internet and e-mail), and in techniques of document reproduction.

Intelligent Computing Dec 28 2022 This book focuses on the core areas of computing and their applications in the real world. Presenting papers from the Computing Conference 2020 covers a diverse range of research areas, describing various detailed techniques that have been developed and implemented. The Computing Conference 2020, which provided a venue for academic and industry practitioners to share new ideas and development experiences, attracted a total of 514 submissions from pioneering academic researchers, scientists, industrial engineers and students from around the globe. Following a double-blind, peer-review process, 160 papers (including 15

poster papers) were selected to be included in these proceedings. Featuring state-of-the-art intelligent methods and techniques for solving real-world problems, the book is a valuable resource and will inspire further research and technological improvements in this important area.
